SaferMe for Health & Safety

SaferMe is on a mission to save one million people dying at work.

And you want your workers to return home safe. SaferMe software allows your team to share safety insights and record risk information that protects your people.

How it works:

Workers submit reports and manage tasks through the SaferMe mobile app.

H&S Reps and Site Supervisors manage and monitor reporting, risk information and training records from the SaferMe web app.

What we offer:

| Site / Project Name |
| What happened? |
| Add a photo if it helps |
| How could we avoid this in the fut |

Tape area
Tape area around uneven ground / pothole so no MEWP can be used in the area until the ground is levelled.
Report:
Hazards & Risks

✓ **Task completed**

☑ **View task**   ☐ **View report**

MODULE ⬍	CATEGORY ⬍	COMPETEN
Forklift Operation	Competency	3 - Comp
Digging SOP	Standard Operation Procedure...	2 - Traine
Digging SOP	Standard Operation Procedure...	2 - Traine

First Aid	Certification / Qualification	
Drivers License	License	

Flexible Form Builder

Build customised forms to suit your business or project needs.

There's no limits to the types of forms you can create!

Build forms from scratch or use our templates.

Task & Corrective Actions

It's never been easier to stay on top of corrective actions.
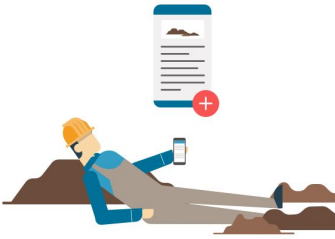

Assign follow-up tasks to other workers and manage your task list through the web and mobile apps.

Complete tasks with the push of a button.

Training Management

Manage employee certs, SOPS, licences and other qualifications in the SaferMe web app.

Receive notifications when an employee's record is about to expire.

Digital Risk Register

Manage your organisation's risks in one place.

Add controls so workers can review the information when completing pre-starts.

Forms via QR Codes
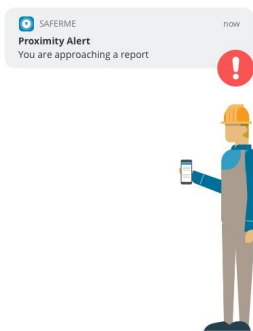

Any form can be accessible via QR code.

Use QR codes for site inductions or vehicle checks. These forms can be completed by employees, contractors and site visitors.

Incident Investigations

Hide incident investigations from standard mobile app users.

Incidents only notify a team of SaferMe Admins who can manage the report until resolution.

SAFERME
Proximity Alert
You are approaching a report

SaferMe
The leader in advanced safety
★★★★

Proximity Alerts to Hazards

Set-up a Safety Bubble to notify you to reports in your area.

Receive alerts when your mobile app approaches a hazard.

Offline Reporting on Mobile

Make reports whether you are online or out of service.

Reports are synced to the web platform when the app is back in connection.

Available on iOS and Android

Our mobile app is available to iOS and Android users.

It is also compatible with tablets and iPads.
